## Reduce accounting administration expenses and bill your customers accurately - every time

With the Patriot Accounting Module, billing information can be transferred from Patriot to your Accounting software seamlessly and automatically.

Data transfer is flexible and easily managed in the Patriot 6 graphical user interface. Pre-defined configurations mean that the module can be set up and in place in the shortest possible time. Alternatively, you can make your own decisions about the billing information that needs to be transferred.

The Accounting module will transfer data from Patriot to your accounting software for the billing period you choose. Billing transfers can be monitored with report feedback enabling accounting staff to immediately identify and remedy inaccuracies in transactions.

Invoice transfers can be fully automatic or they can be reviewed in full by management before being sent from Patriot to your accounting software.

Transfer listings may be exported to spreadsheets for further analysis. The Accounting Module can eliminate the costly errors which inevitably occur when billing data is manually transferred.

## Maximise profitability and reduce staff workload

### Response and Work Order Billing

Details of jobs carried out are automatically transferred to customer invoices. Accurate and detailed information on invoices can help improve collections.

### Recurring Billing

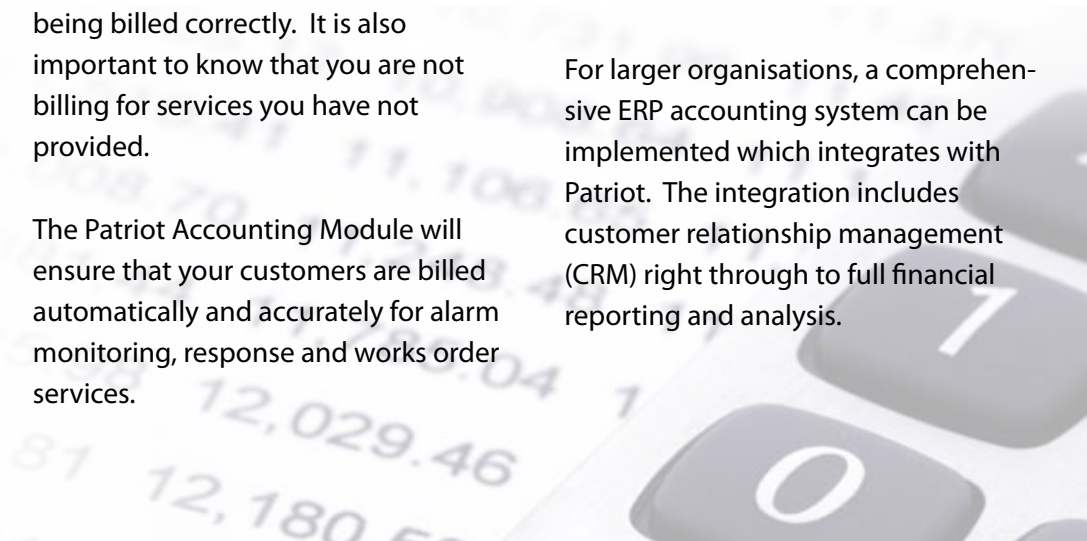

With recurring billing you can guarantee the services performed are being billed correctly. It is also important to know that you are not billing for services you have not provided.

The Patriot Accounting Module will ensure that your customers are billed automatically and accurately for alarm monitoring, response and works order services.

As every monitoring business has unique invoice layouts, the module can be configured to ensure that your customers continue to receive invoices in a familiar format.

Adopting the Patriot Accounting module will help you reduce billing errors, maximise profitability and reduce staff workload.

For larger organisations, a comprehensive ERP accounting system can be implemented which integrates with Patriot. The integration includes customer relationship management (CRM) right through to full financial reporting and analysis.
