

## IP Monitoring

Monitor IP equipped alarm panels located anywhere,  
without an alarm receiver

# IP Monitoring

## Patriot IP Monitoring offers a cost effective alternative to traditional PSTN communications

### This module will save money for you and your customers

Patriot's IP Monitoring Modules communicate directly with selected IP equipped alarm panels. Expensive PSTN alarm receivers are not required. Sending signal data via IP immediately eliminates call costs for the customer.

This is a significant saving – particularly for large commercial sites.

### IP alarm panels are supervised

Patriot IP Monitoring Modules constantly supervise IP alarm panels. The absence of a poll from a panel will generate an alarm notification in Patriot which can be responded to immediately.

IP Monitoring offers additional protection against equipment failure and malicious damage.

## The Patriot IP Receiver Module delivers low setup costs, reduced signalling costs and alarm panel supervision

### IP Signalling can be multipath

IP equipped alarm panels can signal back to Patriot via a combination of land line, wireless or cellular. Monitored alarms no longer depend on the availability of PSTN landlines. Portable and temporary alarm installations can use a variety of IP options to communicate with the Patriot monitoring station.

### VoIP phone systems no longer pose a problem

Increasingly, monitored sites are moving to IP based phone systems. This is an issue for central stations which offer only PSTN monitoring.

IP allows monitoring stations to offer the widest range of signalling options.

Patriot IP Monitoring is fully compatible with digital communication systems.

### Existing PSTN Panels can be monitored via IP

The ICT PostX IP communicator will convert any existing Contact-ID alarm panel to polled IP signalling with an optional PSTN backup path.

Similarly, Emizon and CSL DualCom allow standard alarm panels to use multi-path signalling via IP.

# IP Monitoring Requirements

## Patriot Package

Patriot Lite, Professional or Enterprise

## Other requirements

Broadband IP connectivity
