Mapping

Eliminate guess work when dispatching patrols with the Patriot Mapping Module

Mapping

Patriot's Mapping Module will save you time and money

The Patriot Mapping Module enables operators to accurately direct response teams and emergency services to customer locations. Response times are improved and costly errors avoided.

When processing activations, monitoring station operators can view sites on a map within the Patriot environment with one mouse click.

Map detail is also available on demand in customer maintenance windows.

The Mapping Module is extremely easy to use and its intuitive interface minimises operator training requirements. Mapping helps eliminate costly dispatch errors which could potentially damage the professional reputation of your monitoring station.

Multiscreen capability in Patriot 6

Improve your Monitoring station's accuracy and effectiveness

A Current Activations screen can be displayed showing the location of current alarm events and monitoring statistics. This is used by monitoring supervisors and can be displayed on a video wall.

Multi Screen

Multi-screen displays in Patriot 6 enable client and activation detail to be viewed alongside detailed maps. This provides comprehensive and accurate information about all aspects of any activation.

Tracking

Patriot interfaces with a number of tracking devices which provide real-time asset and personnel tracking.

Patriot will maintain a movement history from GPS information which can be reviewed graphically using the Patriot Mapping Module.

Worldwide Coverage

Patriot Mapping is available to monitoring stations in most countries.

Note: The Patriot Mapping Module uses 3rd party mapping engine software which is not included in the Module price
