Remote Receiver

Your CMS can monitor standard PSTN alarm receivers
anywhere - via the Internet

Remote Receiver

With the Patriot Remote Receiver Module, your CMS can monitor standard PSTN alarm receivers - anywhere - via the Internet

Your customer base can be extended into other cities, expanding your source of monitoring prospects.

The Patriot Remote Receiver module includes hardware and software components which enable monitoring of standard PSTN alarm receivers via the Internet. Receivers can be located anywhere there is a concentration of monitoring customers – the next town or another country.

Your customers' PSTN panels communicate with alarm receivers using low cost local calls. Patriot handles the remote receivers as if they are physically connected to the Patriot Server and no special hardware is required.

Save money and tap into your competitors' markets.

Alarm panels use low cost local calls to signal to the remotely monitored receivers. Patriot monitors the receivers via a broadband Internet connection.

This means no long distance call costs for the monitoring station or your customers. Nearly all alarm panels include PSTN diallers and can connect to Patriot equipped remote receivers without modification.

Expand your customer base and increase profitability

With Patriot's Remote Receiver Module you are protected against network failure.

The communications converter located at the remote receiver uses Patriot designed software to monitor the status of alarm signals and the responses from the Patriot monitoring station. The integrity of the Internet connection is constantly supervised.

If the network fails, the converter can automatically fall back to an alternative connection. This could be PSTN or a mobile network. The communications link is always maintained. When the primary Internet connection is available again, the alternative link is immediately dropped and normal TCP/IP signalling resumes.

Everything you need in one package.

The Patriot Remote Receiver Module is a complete solution. It includes Patriot software, the communications converter, optional PSTN Modems or GPRS Modems and most importantly, installation assistance from the Patriot 24/7 Support Desk. The module is compatible with most popular PSTN alarm receivers and multiple units may be installed across a wide geographical area.

The Patriot Remote Receiver Module enables you to expand your customer base and increase your profitability with minimal communications costs. Simply powerful, Patriot gives your monitoring station the competitive edge.

Remote Receiver Module Requirements

Patriot Package

Patriot Professional or Enterprise

Other requirements

Remote Receiver Module

Broadband Internet at CMS and remote receiver location

PSTN line at receiver location and modem at CMS
