Camera Modules

Adds powerful tools to the monitoring station feature set

Camera Modules

Camera verification of alarm activations is a key requirement for central monitoring stations

There is a wide range of CCTV, camera and DVR systems available and this diversity presents problems for monitoring station management and operators. Patriot presents a standardised interface which enables operators to use the same user interface, controls and processes for the various camera systems in use at a monitoring station. Response times are improved and training requirements minimised.

Expanded video monitoring options
Patriot is adding an ever expanding list

of CCTV and camera systems supported and responds to market demands as new products are introduced.

Effective and meaningful camera data

The module makes camera data available in a number of ways. Event clips sent to the monitoring station prior to and during an activation are made available to operators as part of the activation response process.

Camera groupings enable video from a number of cameras associated with an alarm zone to be quickly and effectively analysed by operators.

Historical camera data can be reviewed in detail as part of the resolution and analysis of an alarm event.

All camera based activity by operators is logged in the Patriot database and is available for customer and user reporting.

Actual and received camera data can be compared enabling monitoring stations to detect and remedy issues with effective camera data transmission.

Multi screen display for effective event handling

Patriot 6 uses multi-screen capability to enable operators to view video data while keeping site and activation detail available at the same time.

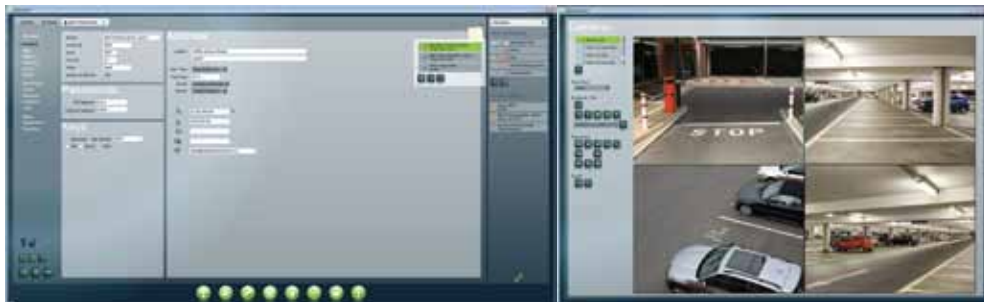

The accuracy and speed of event processing is improved by the availability of all information pertinent to an activation.

Additional features

The Patriot Camera Module adds powerful tools to the monitoring station feature set. Guard tours can be scheduled and monitored by Patriot.

Camera and DVRs can be monitored for malfunction and faults logged, notified and work orders raised all in the Patriot environment. Cameras and equipment which generate repeat false alarms can be put in test mode while problems are remedied. False alarms are minimised.

The Patriot Camera Module integrates CCTV video into the monitoring environment.
